

## Information

### Pro-biJo Organic Baby Food

A control of the finished baby food is by far not enough - it is necessary to control from acre to the finished food. pro-biJo makes a point of the fact that the first control measures already take place on the acre with raw materials. Only a clean acre can produce clean vegetables or fruits.

Bioturm has decided for the partner BIOLAND in order to have 100 % security of this biological quality. Before the raw materials for our products are used, we analyse them thoroughly: We do not allow any ingredients which are not ideal for baby food. No baby product leaves our house before it has taken several examinations.

If you feed your baby with pro-biJo, you can be sure that your baby gets pure products. pro-biJo baby food has to fulfil six conditions:

- \* 100 % controlled biological cultivation
- \* no added vitamins
- \* no added colouring and preservatives
- \* no added sugar
- \* no added salt
- \* as genuine and pure as possible

pro-biJo offers 22 new delicious varieties based on an attractive price. Long-year experience guarantees a high quality and reliability!
